

EFFICIENT IN A SINGLE PASS

Equipped with a rotating brush and a collection bin, the Warzée BR200 sweeper brushes and collects in a single pass.

Available widths (cm): 150 - 175 - 200 - 225 - 250

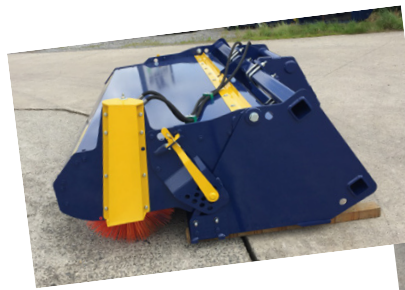

The operation of the sweeper is simple: the hydraulic motor drives the brushes, which direct the material into the collection bin. The collection bin, equipped with hinges, is emptied by simply tilting it.

The sweeper consists of multiple polypropylene brushes with a diameter of 600 mm. The brushes can be easily replaced when worn.

The brushes can be easily replaced when worn.

The bolted attachments are custom-made for any type of equipment. The sweeper can also be mounted on a tractor's front or rear 3-point hitch.

The brush height is manually adjustable on the side of the machine. This allows the height to be adapted depending on the surface or the wear of the brushes.

The collector bin, with a depth of 650 mm and a height of 650 mm, is mounted on a pivot. The bin is emptied by simply tilting it.

Composition of the sweeper :

- Hydraulic motor
- Custom-made bolted attachments
- 600 mm diameter polypropylene brushes
- Hardox © scraping blade
- Manual brush height adjustment
